I understand that completing the Correctional Program Plan may increase, but not guarantee, my chance of paroling on my minimum sentence. I also understand that if I have been sentenced to a recidivism risk reduction incentive sentence, completing my Correctional Program Plan is one of many conditions for receiving a reduction of my minimum sentence.

Comments :

Mr. Parker mentioned that he has a history of using marijuana, and that he last used two months ago. He indicated that he never participated in any substance abuse treatment programs.

Mr. Parker reported that he has been participating in mental health treatment since he was about five years old. He stated that he has been diagnosed with Bipolar Disorder, Anxiety Disorder, and ADHD, and that he has been treated with Adderall, Seroquel, Paxil, and Vistaril. He also mentioned that he has a history of hearing the voice of his deceased friend telling him "positive things" about once a month. He indicated that he last experienced these hallucinations one week ago. He denied current stress, anxiety, and depression, as well as past or current suicidal ideations.

Mr. Parker was evaluated by the psychiatrist at SCI Camp Hill shortly after reception. The diagnostic impressions offered at that time were Depression NOS and Anxiety Disorder NOS, with rule-out diagnoses of Mood Disorder and Antisocial Personality Disorder. The GAF was assessed at 50-55. He was prescribed Paxil and Vistaril.

Mr. Parker completed the PAI twice; however, the results from both attempts were invalid.

The contents of this report are confidential and the information contained in it shall not be reviewed by or shared with persons who are not members of the treatment team
